Activity 1: MinimuPathsTimes

TABLE1 (times in milliseconds WITHOUT OPTIMIZATION)

n	MinimumPathTimes
200	131
400	972
800	7 780
1600	62 059
3200	OoT

The data looks so close to an $O(n^3)$ complexity, because in that one, a double in n means a x8 in time ($2^3 = 8$ vs $4^3 = 64 \Rightarrow 64/8 = 8$ ratio). Looking at the times in our data we can appreciate a very close multiplication to 8, so we can assure that is a $O(n^3)$ complexity.
